Technology Showcase

Sharing information and having good communication links has always been important for Fort Severn First Nation because it is a close-knit and remote community.

This technology showcase traces the history of how Fort Severn community members have been communicating and sharing information, starting with the time before digital technology existed in the community. When information and communication technologies (ICT) were introduced to Fort Severn, the community shaped them to meet their needs. Since those early days, Fort Severn community members have developed their own content, programs and services.

Over the years, Fort Severn has demonstrated its leadership with broadband and information and communication technologies by developing and implementing a community radio station, a community cable

THANK YOU

Brian Beaton

Research Associate, Keewaytinook Okimakanak Research Institute

Researcher, First Nations Innovation Project

Graduate Student, Faculty of Education, Critical Studies, University of New Brunswick
